DETAILED ACTION

Response to Amendment

1. Examiner acknowledges that the applicant has amended claims 1, 4, 5, 8, 9, 10, & 12, newly added claim 14, and cancelled claims 3, 6, & 7.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: the claims recite an automatic headlight axis direction control system comprising a failure detection means for detecting a failure in the light axis direction adjustment means based upon a predetermined value and the level and the level of the signal that is outputted from the direction detection means when the light axis direction adjustment means is driven such that the direction detection means outputs the predetermined value unless a failure occurs in the light axis direction adjustment means before the light axis direction is controlled using the light axis direction adjustment means, wherein the failure detection occurs in repose to an engine starting operation. Toda et al. (USPN 6,305,823) similarly discloses an automatic headlight axis direction control system with a failure detection means in operable while engine is running when error detection takes place, but not in response to an engine starting operation. Because none of the references disclosed the detailed limitation of failure detection occurs in response to an engine

starting operation, nor is there any motivation to combine them, the claims are deemed patentable over the prior art of record. Claims 1, 2, 4, 5 & 8-14 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
